

PRIME CONTRACTORS · ENGINEERING FIRMS · STAFFING & IT PARTNERS

Put a software specialist on your team for one defined piece of the work.

For firms that win the client and need a specialist to build, connect or review part of the solution.

NAICS	IDENTIFIERS	BUSINESS SIZE	LOCATION

WHAT WE BUILD

Turn a requirement into a working prototype

Clarify what the client actually asked for and produce something they can click through and approve before you commit budget.

Build a defined scope with clean handover

Applications, forms, dashboards or reporting features delivered against an agreed feature list, with documentation your team can pick up.

Integration work

Make existing systems exchange data — Microsoft 365, SharePoint, Power BI, APIs, databases and file-based sources.

Independent review before you ship

Test the software against the client's requirements, document defects, and provide screenshots and test results for your team to review.

AI features with an audit trail

Add AI drafting or summarizing where it helps, with human approval gates and a record of what was reviewed.

HOW WE GET STARTED

- 1 Talk with us.** A brief introductory conversation, at no charge.
- 2 Choose the work.** Agree on a useful first assignment.
- 3 Approve the quote.** Deliverables, price, and timing are agreed before paid work begins.

Additional work is agreed separately.

Example project pricing: corp-to-corp, subcontract or 1099. **Hourly rate:** \$165/hr, or fixed fee by scope. First subcontract \$15,000–\$40,000.

WHY MG V

You keep the client

MGV works behind your brand on your scope. No competing for the relationship.

20 years inside a Fortune 500 bank

Adolph White Jr. spent more than 20 years at Capital One on contact-center systems, network changes and cross-team delivery. Corp-to-corp, 1099 or subcontract.

Documented handover, not a black box

Code, runbooks and notes that explain how it runs and what needs ongoing support.

Example: prototype delivered for a public-sector pursuit

A clickable strategic-plan tracking system: staff submit updates with supporting records, a reviewer approves or returns them, approved figures flow into a generated PDF report. Demonstrates separate staff and reviewer roles. A complete illustrated guide is available. Independently reviewed before release.

Built as a demonstration for a City of Chesapeake request for information. It is not a deployed system.

SELECTED WORK

DNA Health Insights · live

Live app, sole engineer: in-browser DNA file processing, 102 API endpoints, 4,900 tests, 20 CI gates. Built solo in five months. Scan to open it. Family member's practice — a work sample, not an independent reference.
